

SOLUTION OVERVIEW FOR

# DOUBLE-TAKE® FLEX

## Managed Desktops with Double-Take® Flex

### Diskless Desktops with Double-Take® Flex

Schools, call centers and environments with desktops that are routinely shared by many people are susceptible to changes and viruses. Double-Take Flex allows network management tasks to be consolidated and streamlined while manageability is significantly improved. Booting the operating system over the network centralizes all data storage and management, and downtime or corruption of a managed desktop can be corrected by simply power cycling the machine and booting a fresh OS image in real-time.

Double-Take Flex also eliminates the time consuming and costly task of replacing failed hard drives. Desktops are quickly booted from the backup boot volumes located on the SAN or NAS. The operating system and all end user applications are run on the client machine providing the full functionality of a true "thick" client - without the requirement for a hard drive.

### Benefits of Double-Take Flex include:

- Fast bare-metal deployment
- Fast provisioning and re-provisioning of desktops
- The ability to reboot a desktop from a shared image, even return it to a pristine state.
- Using the RES Powerfuse add-on allows users to log in to any desktop and receive their individual image and profile settings or "Workspace".s.
- Simplified recoverability from desktop failure
- Increased security; no data is stored on the hard drive.
